

**TRAFFIC ADVISORY  
CITY OF ALBANY  
THURSDAY, JUNE 28**

The City of Albany is issuing the following travel advisory for afternoon traffic on June 28, 2012 due to numerous special events in Downtown Albany. Motorists leaving the City of Albany after their work day or might be attending one of the many special events in downtown Albany may encounter delays in their commute. With the ongoing roadwork on I787 and Alive @5 at Corning Riverfront Park, we are anticipating slower than normal rush hour traffic with frequent and possible longer delays in downtown. Motorists that normally use southbound Broadway and southbound Water Street to Quay Street along the river to access I787 northbound for their ride home should seek alternate routes to avoid the delays. Northbound Broadway (RT32) into Menands to access I787 is recommended.

IN ADDITION to these events, Road closures will be in effect for two other major special events on June 28, 2012. N. Pearl Street between Columbia Street and Pine Street for "Pearl St. Live" and S. Pearl Street between Hudson Avenue and Beaver Street for Roger Waters at the TU Center will be closed from 6:30PM until 11PM for these events. Motorists whose destination is either of these events should plan additional commute time to avoid delays. Additionally, alternate routes should be considered to avoid the road closures. Motorists who normally use I787 southbound to the Clinton Avenue exit 4B whose destination is the TU Center, should use the following route to avoid the closures and arrive at the various parking areas: From the off ramp turn left onto Broadway, then turn right onto State Street, then turn left onto S. Pearl Street to avoid the above mentioned closures. Variable Message Boards will be deployed in downtown Albany on these roadways with messages showing this route. Parking is available for these two events either on street or in the various downtown parking garages.

Motorists who use the Madison Avenue Exit 3B ramp for TU Center events should continue to do so as they normally would.
